

## Abstract of the Invention

### TEMPORARY SURVEILLANCE SYSTEM

A surveillance system is provided including a platform having a plurality and  
5 variety of cameras or sensors mounted thereto, and a base enclosure adapted to  
accommodate a power supply, a variety of electronics and other equipment for controlling  
and providing power to the surveillance equipment. The base is constructed to be tamper  
resistant and immovable by manual means. A substantially hollow support pole includes  
a lower portion detachably mounted to the base, and an upper portion mounted to the  
10 platform. Wires and cables for connecting the surveillance equipment with the  
electronics and power supply are run through the support pole. Power to the system may  
be supplied through existing power sources, for example a 120V power source. A current  
breaker secured in an environmentally protected housing on the exterior of the  
surveillance system connected to the power supply and the electronics and surveillance  
15 equipment.
